

Wazuh Agents & Indexer Connector Troubleshooting

Frank Santos — mystikal.dev | July 8, 2026

Session Summary

Task	Status
Wazuh agent installed on CT103 (homepage)	Done
Wazuh agent installed on pve1 (Proxmox host)	Done
All 3 agents active and connected	Done
Vulnerability detector config added to ossec.conf	Done
Indexer SSL hostname verification fixed (verify_hostname: no)	Done
nodes_dn updated in opensearch.yml (wazuh-1 added)	Done
Security config reapplied via securityadmin.sh	Done
Filebeat keystore credentials updated	Done
Indexer connector data flow for new agents	Pending — known 4.14 issue

1. Agent Deployment

All three agents now connected to Wazuh manager:

ID	Name	IP	VLAN	Status
001	vaultwarden	192.168.10.70	Servers	Active
002	homepage	192.168.1.71	Management	Active
003	pve1	192.168.1.10	Management	Active

```
Verify agents: /var/ossec/bin/agent_control -lc
```

2. Vulnerability Detection Configuration

2.1 Config Added to ossec.conf

Wazuh 4.14 uses vulnerability-detection (not the deprecated vulnerability-detector). The correct block was already present:

```
<vulnerability-detection> <enabled>yes</enabled> <index-status>yes</index-status>  
<feed-update-interval>60m</feed-update-interval> </vulnerability-detection>
```

Added deprecated vulnerability-detector block by mistake — caused XML conflict. Removed with sed and fixed missing closing tag.

3. Indexer Connector Troubleshooting

3.1 Root Cause Diagnosis

Manager's wazuh-modulesd indexer connector was failing with 'bad_certificate'. Traced through multiple layers:

- Initial error: IndexerConnector initialization failed — retrying
- Indexer log showed: bad_certificate — SSL handshake failure at HTTP layer
- curl -v diagnosis: SSL: no alternative certificate subject name matches target host name '127.0.0.1' — indexer cert (CN=node-1) has no SAN for 127.0.0.1
- Fix applied: Added no to indexer SSL block in ossec.conf
- Additional fixes: Added CN=wazuh-1 to nodes_dn in opensearch.yml; Updated admin certs in /etc/wazuh-indexer/certs/; Ran securityadmin.sh to apply security config
- Filebeat keystore: Updated username/password via: filebeat keystore add username --force

3.2 Key Config Changes

ossec.conf indexer block — added verify_hostname:

```
<indexer> <enabled>yes</enabled> <hosts> <host>https://127.0.0.1:9200</host> </hosts> <ssl>
<ca>/etc/filebeat/certs/root-ca.pem</ca>
<certificate>/etc/filebeat/certs/wazuh-server.pem</certificate>
<key>/etc/filebeat/certs/wazuh-server-key.pem</key> <verify_hostname>no</verify_hostname>
</ssl> </indexer>
```

opensearch.yml nodes_dn — added wazuh-1:

```
plugins.security.nodes_dn: - "CN=indexer,OU=Wazuh,O=Wazuh,L=California,C=US" -
"CN=wazuh-1,OU=Wazuh,O=Wazuh,L=California,C=US"
```

3.3 Current Status

SSL handshake error resolved — indexer log no longer shows bad_certificate. Connector initialization warnings appear only at startup. Package count for new agents (homepage, pve1) still not flowing into indexer — known Wazuh 4.14 indexer connector issue. Vaultwarden data (398 packages, 161 vulnerabilities) confirmed in indexer.

4. Useful Diagnostic Commands

Check all agents:

```
/var/ossec/bin/agent_control -lc
```

Restart all agents:

```
/var/ossec/bin/agent_control -R -a
```

Check indexer health:

```
curl -sk -u admin:PASS https://127.0.0.1:9200/_cluster/health?pretty
```

Check package count:

```
curl -sk -u admin:PASS
https://127.0.0.1:9200/wazuh-states-inventory-packages-wazuh/_count?pretty
```

Apply security config:

```
export JAVA_HOME=/usr/share/wazuh-indexer/jdk && bash
/usr/share/wazuh-indexer/plugins/opensearch-security/tools/securityadmin.sh -cd
/etc/wazuh-indexer/opensearch-security/ -nhnv -cacert /etc/wazuh-indexer/certs/root-ca.pem
-cert /etc/wazuh-indexer/certs/admin.pem -key /etc/wazuh-indexer/certs/admin-key.pem -p 9200
```

Test cert connection:

```
curl -v --cert /etc/filebeat/certs/wazuh-server.pem --key  
/etc/filebeat/certs/wazuh-server-key.pem --cacert /etc/filebeat/certs/root-ca.pem  
https://127.0.0.1:9200/
```

Check indexer logs:

```
tail -30 /var/log/wazuh-indexer/wazuh-cluster.log | grep -v 'at org|at io|at java'
```

Update Filebeat keystore:

```
filebeat keystore add username --force && filebeat keystore add password --force
```

5. Next Steps

- Investigate Wazuh 4.14 indexer connector issue — check GitHub issues and official docs
- Configure OPNsense syslog to forward firewall logs to Wazuh (port 1514)
- Add wazuh.mystikal.dev subdomain to Caddy
- Continue CIS benchmark hardening on CT102 — password policies next
- Install agents on remaining containers as they're added
